## Thermodynamics – Part 1

**Pre-Lab:** Please do the pre-lab exercises on the web.

### Introduction

It had been recognized by the 18<sup>th</sup> century that the amount of heat,  $Q$ , required to change the temperature of a system is proportional to the mass,  $m$ , of the system and to the temperature change,  $\Delta T$ . This proportion is what we now know as “specific heat” and is often abbreviated by  $c$ . This value is valid for heat flow into or out of the system. This lab will help us see how to determine the specific heat of a known substance.

### Equipment/Supplies

Calorimeter	Unknown sample #2	Unknown sample #1
Thermometer	Water	Stirrer
Graduated cylinders	Paper towels	Boiler
Balance		

### Section 1: Calorimetry

Calorimetry is the quantitative measurement of heat exchange. When different parts of an isolated system are at different temperatures, heat will flow from the portion at higher temperature to the portion at lower temperature. If the system is completely isolated, no heat can flow into or out of the system, that is, the energy of the system is conserved. You can determine the specific heat of an unknown material by recognizing the First Law of Thermodynamics, in this case,  $Q_{\text{sys lost}} = Q_{\text{sys gained}}$ . The specific heat of water is  $4190 \text{ J/kg}\cdot\text{K}$ . The density of water is  $1.0 \text{ g/cm}^3$ . The specific heat of the calorimeter is  $910 \text{ J/kg}\cdot\text{K}$ .

$Q_{\text{sys lost}}$  is found by adding up all the  $Q=mc\Delta T$  from each object whose temperature decreases. Similarly,  $Q_{\text{sys gained}}$  is found by adding up all the  $Q=mc\Delta T$  from objects whose temperature rises.

1. In the pre-lab exercise on the web you derived the formula to calculate the specific heat of an unknown object given its mass,  $m_s$ , by adding it at temperature  $T_a$  to a mass,  $m_w$ , of water at  $T_b$  and the system coming to an equilibrium temperature  $T_f$ . Write this equation on your results sheet for use in section 2.

2. Develop an experiment to determine the specific heat of an unknown sample using the formula you derived for number 1 and using the materials listed above. Use a large amount of metal (on the order of 300g) when you design your experiment.

## Section 2

1. Using the procedure you have developed in Section 1, experimentally determine the specific heat of unknown sample #1.

What value did you obtain for the specific heat? Using the table in your book, identify the substance.

2. Using the same procedure, experimentally determine the specific heat of unknown sample #2.

What value did you obtain for the specific heat? Using the table in your book, identify the substance.

DATA	
Unknown Sample # 1	
<b>Mass of sample</b>	<b>kg</b>
<b>Mass of water</b>	<b>kg</b>
<b>Initial temperature of water</b>	<b>°C</b>
<b>Initial temperature of sample</b>	<b>°C</b>
<b>Final temperature of system</b>	<b>°C</b>
Unknown Sample #2	
<b>Mass of sample</b>	<b>kg</b>
<b>Mass of water</b>	<b>kg</b>
<b>Initial temperature of water</b>	<b>°C</b>
<b>Initial temperature of sample</b>	<b>°C</b>
<b>Final temperature of system</b>	<b>°C</b>

## Thermodynamics – Part 2

**Pre-Lab:** There is no lab prep for this lab. Please review the procedure and relevant sections in your book prior to lab.

### Introduction

A transition from one state of matter to another is called a phase change. Water changes phase from ice to liquid and again from liquid to water vapor. When we add heat to ice it changes phase rather than increasing its temperature until after the phase change is complete. The amount of heat required to change one kilogram of ice to liquid is called the heat of fusion  $mL_f$ . The plus sign is used when heat is entering (melting) and the minus is used when heat is leaving (freezing). The heat of fusion for water is  $3.34 \times 10^5$ . The amount of heat required to turn one kilogram of water into water vapor is called the heat of vaporization. The heat of vaporization for water is  $2.56 \times 10^6$ .

### Equipment

Calorimeter		
Thermometer	Water	Ice
Stirrer	Graduated cylinders	Paper towels
Boiler	Balance	

### Section 1

1. Derive a formula for finding  $L_f$  for a known quantity of ice.
2. Develop an experiment to determine the heat of fusion of ice using the formula you derived for number 1 and using the materials listed above.
3. Using the procedure you developed in step 2, find the heat of fusion for your sample of ice and compare with the known value.

### Section 2

1. Derive a formula for finding  $L_v$  for steam. Remember the transition from steam to water heat  $Q = -mL_v$  because heat is leaving the system.
2. Determine the heat of vaporization for water
  - a. Weigh the calorimeter and water before and after adding the steam to get the mass of steam which condensed.
  - b. Start with cold water (below room temperature) and introduce steam under the surface of the water until the temperature rises to about  $50^\circ\text{C}$ .
  - c. Remove the steam hose, wait a few seconds and record the final temperature.

<b>Ice</b>	
Initial mass of ice	kg
Mass of water	kg
Initial temperature of water	°C
Final temperature of system	°C
<b>Steam</b>	
Initial mass of water	kg
Initial mass of calorimeter + water	
Initial temperature of water	°C
Final temperature of water	°C
Final mass of water + calorimeter	kg
Amount of steam condensed	kg

# Thermodynamics Part 1

## Results

Please use the back of this page or attach another sheet if you need more room for your calculations.

### Section 1

1. What is the heat capacity of your calorimeter? \_\_\_\_\_
2. Derived formula for specific heat of an unknown sample? \_\_\_\_\_  
\_\_\_\_\_
3. Describe how you would go about your experiment \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

### Section 2

1. Unknown # 1 Specific Heat? \_\_\_\_\_ Identity? \_\_\_\_\_ Percent Error \_\_\_\_\_
2. Unknown # 2 Specific Heat? \_\_\_\_\_ Identity? \_\_\_\_\_ Percent Error \_\_\_\_\_

### Overall

What was good about this lab? \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

What would you do to improve it? \_\_\_\_\_  
\_\_\_\_\_
